SUMMARY

Production Engineer with an MBA in Business Intelligence & Data Science and experience across Operations, Logistics, Customer Analytics and Growth. Worked at companies such as iFood, Grupo Boticário and Vibra Energia, partnering with cross-functional teams to develop KPIs, analyze performance and drive business initiatives.

Throughout my career, I have gradually evolved from automation and BI initiatives toward a stronger focus on connecting analytics with business needs and driving improvements through data and AI-enabled solutions.

WORK EXPERIENCE

IFOOD **(June/2025-June/2026)**

Business Analyst | Groceries Operations

- Lead analyses and initiatives focused on stockout prevention, mitigation and recovery across the Grocery & Wholesale vertical.
- Monitor initiative performance through KPIs and analyses, enabling impact assessment and opportunity identification.
- Leverage Databricks (SQL and Python), automation and AI-enabled solutions to accelerate investigations and improve analytical efficiency.
- Collaborate cross-functionally with Operations, Product, Engineering, Data and Partner Success teams to drive strategic initiatives.

Key Projects & Results:

- AI-Powered Recommendation Model Quality Framework: Created the recommendation audit process and developed LLM-based agents to scale quality assessments and feedback loops, enabling continuous model improvement and contributing to reductions of up to 11% in customer complaints related to inadequate substitutions.
- Allow List: Developed analyses to identify products eligible for rule flexibility, contributing to GMV gains of 5% to 10% in participating stores and approximately 0.5% impact on the vertical's GMV.
- Stockout Recovery Funnel: Designed metrics and KPIs to monitor the substitution journey, enabling the identification of GMV recovery opportunities and key loss points throughout the process

GRUPO BOTICÁRIO **(July/2024 – January/2025)**

Data Analyst l Customer Analytics

- Conducted customer profile, behavior and lifecycle analyses to inform decisions across Marketing, Product, Channels and New Business teams.
- Developed ad hoc analyses in SQL (BigQuery) to evaluate brand initiatives, measure results and identify customer consumption patterns.
- Explored large datasets to generate insights on customer acquisition, retention, reactivation and behavioral trends.

Key Projects & Results:

- Customer Analytics Data Governance: Led documentation, standardization and evolution initiatives for Customer Analytics data products, improving information reliability and promoting greater self-service capabilities across business teams.
- Production Migration: Migrated 100% of tables and stored procedures from development to production environments in Google BigQuery, including documentation and resolution of identified inconsistencies.
- Data Efficiency & Governance: Implemented a structured sandbox cleanup process, contributing to an initial reduction of BRL 1,500 per year in BigQuery storage costs and improving the organization and reliability of the area's data products.

VIBRA ENERGIA **(June/2023 – June/2024)**

Data Analyst l Corporate Data Team

- Developed dashboards and analytical solutions using Tableau and SQL to monitor commercial, operational and customer experience KPIs.

- Partnered with Commercial, Logistics, Customer Service, Marketing and People Analytics teams to provide analytical support for business decisions.
- Managed Tableau Server governance, ensuring data availability, integrity and security while supporting self-service analytics across business teams.
- Conducted data validations and quality analyses to identify inconsistencies, improve information reliability and enhance analytical capabilities across the organization.

Key Projects & Results

- Corporate Innovation Program: Conceived and presented the winning gamification proposal aimed at increasing employee engagement and improving customer experience, receiving unanimous recognition from executive leadership.
- Integrated Planning Dashboard: Developed a dashboard used for daily sales monitoring (D-1), improving alignment across strategic teams and enabling faster operational decisions.
- OTIF (On Time In Full): Redesigned the OTIF indicator by contributing to data source development, business rule validation and the evolution of operational analyses.

TOTALENERGIES

Oil & Gas Trading Intern **(May /2022 –May/2023)**

- Automated critical processes within the Oil & Gas Trading area using VBA, Power Query and Excel, improving operational reliability and reducing manual activities.
- Developed solutions to improve operational processes, including enhancements to the partner loan settlement process, maintaining productivity despite a 120% YoY increase in invoice volume.
- Collaborated with Europe-based teams to ensure alignment between local processes and global corporate guidelines.

ICONIC

Procurement & Market Intelligence Intern **(March/2021 – April/2022)**

- Developed dashboards and analytical solutions in Power BI to support sales, cost, spend and category performance monitoring for Procurement and Market Intelligence teams.
- Built datasets and automated reports and processes using Excel, Power Query, VBA and Microsoft Power Platform, improving operational efficiency and expanding information availability for managers and executives.
- Supported market, sales and procurement analyses by integrating data from multiple areas, contributing to business performance monitoring and opportunity identification.

EDUCATION

MBA in **Business Intelligence & Data Science** – IBMEC – 2025
Bachelor's in **Production Engineering**– Universidade Federal do Estado do Rio de Janeiro (UNIRIO) – 2023
